                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to new Moraxella bovis antigens and nucleic acid sequences encoding these antigenic polypeptides. The antigenic polypeptides and polynucleotides are useful for raising an immune response in an animal directed against Moraxella, preferably against M. bovis or M. catarrhalis, and for treating Moraxella infections. The present sequence represents the amino acid sequence of the A subunit of the RTX toxin from M. bovis Dalton 2d.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   705

                                                     This invention describes a novel bacterial preparation (I) which comprises one or more isolated and purified strain(s) of a microorganism, cultured in tryptone yeast extract (TYE) broth, which produces one or more RTX toxins (belonging to the family of toxins referred to as Repeats in Toxins), where the strain(s) have at least one RTX toxin which is cell-associated. The products of the invention have immunostimulatory, antimicrobial, antiinflammatory, antiarthritic and antiabortive activity. The bacterial preparation may be used as vaccines for the prophylaxis and treatment of infectious diseases caused by strains of microorganisms which produce one or more RTX toxins. The infectious diseases are symmetric controlled to the controlled to the controlled to the controlled toxing the

                           Plasmid pAA352 is derived from pAA114, a clone isolated from a genomic library of P. haemolytica. The protein, designated "new leukotoxin" or "LKT 352" is 98% homologous to authentic leukotoxin. LKT 352 and pref. antigenic fragments of it, can be used in vaccines to protect cattle from respiratory diseases. They can also be used to produce antibodies for immunoaffinity purificn. of further proteins. [Fig. contg. sequence v. poor].

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is Pasteurella (Mannheimia) haemolytica modified leukotoxin-66 (lkt66) protein. The modification comprises the removal of amino acids within the hydrophobic transmembrane domain of a full length leukotoxin protein. Modified leukotoxin sequences are used in vaccines to treat or prevent diseases associated with leukotoxin, e.g., respiratory disease, and Mannheimia infection (particularly M. haemolytica infection). In addition, the vaccine is used to prepare a medicament. Furthermore, the plant transformed with modified leukotoxin sequences is fed to an animal such as a ruminant, to prevent or treat respiratory diseases.

                                                                                                                                                                                                                                                                        The hmb gene encoding the haemin-binding protein was expressed in E. coll as a fusion to the Pasteurella haemolytica leukotoxin gene lktA coded for by plasmid pAA352. The hmb gene fragment was taken from pRAP504 and starts at the codon for the 33 rd amino acid residue of ORF1. The haemin binding protein can be used in vaccines for preventing or treating H. somnus infections, which cause thromboembolic

                                                                                                                                                                                                                                                                                                                                 The hmb gene encoding the haemin-binding protein was expressed in E. coli as a fusion to the Pasteurella haemolytica leukotoxin gene lkth coded for by plasmid pAAS52. The hmb gene fragment was taken from pRAP501 and starts at the codon for the third amino acid residue of ORP1. The haemin binding protein can be used in vaccines for preventing or treating H. somnus infections, which cause thromboembolic meningo-encephalitis, septicaemia, arthritis and pneumonia in

From this, two constructs were made in the ptac-based vector, pGH432:laci digested with Smal. One, pAA342, consisted of the 5' Ahaili fragment from lktA while the other, pAA345, contained the entire Mael fragment. Clone pAA342 expressed a truncated leukotoxin peptide at high levels while pAA345 expressed full length leukotoxin at very low levels. The 3' end of the lktA gene of pAA345 was therefore ligated to Styl/BamHI digested pAA342 to yleld pAA352 contg. the LKT352 sequence. The protein expressed from the vector can be used to prepare a subunit vaccine with other P. haemolytica antigens, e.g. fimbrial protein, plasmin receptor or 50K outer membrane protein. The vaccines can be used to parte of cattle from the vaccine with

                                                                                       colonies were screened for their ability to produce leukotoxin by colonies were screened for their ability to produce leukotoxin by colonies were screened for their ability to produce leukotoxin by colonies were screened for their ability to produce leukotoxin by colonies were into the neutrophils. A 4kb crelease of lactate dehydrogenase from the neutrophils. A 4kb creament was obtd. Progressively larger clones were isolated by colonies walking to isolate full length recombinants of ca. 8kb, colonies, one was subjected to restriction enzyme digestion to yield two clones, one expressing truncated leukotoxin peptide at high levels and the other expressing truncated leukotoxin peptide at low levels. The 3' end of the lkt gene from the full length clone was ligated to the truncated gene clone to yield plasmid pha352. The clone was used to produce chimeric proteins by gene fusion with an antigen coding sequence, e.g. the coding sequence of somatostatin, gonadotrophin releasing hormone or rotavirus viral protein 4, i.e. leukotoxin works as a carrier protein to bring about a larger immune response than the antigen alone. Immunisation with these antigens can regulate growth rate, lactation and reproductive efficiency. See also AAR34546-8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      in lambda gtll and pUCl3. Resulting clones were used to transform E coli and individual colonies were pooled and screened for reaction with serum from a calf which had survived a P. haemolytica infection and that had been boosted with a conc. culture supernatant of P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gene libraries of P. haemolytica Al (strain B122) were

                                                                                                                                                                                                                                                                                                                                             A vaccine comprising an outer membrane protein (OMP) extract of Haemophilus somnus enriched with iron regulated proteins is new. The vaccine pref. further comprises an immunogenic leukotoxin polypeptide, esp. an immunogenic pasteurella haemolytica leukotoxin hamologous to LKT352. Example 1.2 describes the prodn. of p. haemolytica recombinant leukotoxin from pAA352.

Two expression constructs were made. One, pAA342, contained the cyrament of the ltkA gene, while the other, pAA345, contained the entire lktA gene, pAA342 expressed a truncated leukotoxin peptide at high levels, while pAA345 expressed full clenth leukotoxin at very low levels. Therefore, the 3' end cof the lktA gene was ligated into pAA342, yielding plasmid pAA352.

LEWT352 or new leukotoxin is 98% homologous to authentic

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The antigenic polypeptides and polypucleotides are useful for raising an immune response in an animal directed against Moraxella, preferably against M. bovis or M. catarrhalis, and for treating Moraxella infections. The present sequence represents the nucleotide sequence of the A subunit the RTX toxin from M. bovis Dalton 2d.

The protein encoded by the plasmid, "new leukotoxin" or "LET 352" is 98% homologous to authentic leukotoxin. LET 352 and pref. antigenic fragments of it, can be used in vaccines to protect cattle from respiratory diseases. They can also be used to produce antibodies for immunoaffinity purifice. of further proteins. [Fig. contg. sequence v. poor] see also AAR10890, AAR20909, AAR10910 and AAQ10783.

22-AUG-1990;
16-OCT-1991;
                                                                   IFN), linked to at least one RTX toxin epitope (preferably the sequence shown in AAWI3865). The RTX toxin used to provide the epitope sequence is preferably a leukotoxin, especially the full-length Pasteurella haemolytica leukotoxin. Alternatively, the leukotoxin is a truncated leukotoxin lacking leukotoxic activity, especially LKT352. The chimeric proteins can be used for the production if vaccines against respiratory diseases such as pneumonia, particularly fibrinous pneumonia caused by P.haemolytica, including shipping fever in cattle.
                                                                                                                                                     AAT60032 and AAT60033 represent the coding sequences for immunogenic chimeric proteins of the invention. This sequence represents a chimeric protein containing the bovine interleukin-2 (II-2) sequence and a leukotoxin sequence. The chimeric proteins of the invention comprise a cytokine, selected from interleukin-2 (II-2) and gamma interferon (gamma cytokine, selected from interleukin-2 (II-2) and gamma interferon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               interleukin-2; IL-2; gamma interferon; gamma Pasteurella haemolytica; LKT352; respiratory fibrinous pneumonia; cattle; therapy; ds.

Pasteurella species, especially Pasteurella haemolytica, are responsible for respiratory diseases in a range of agricultural animals, most particularly cattle, but also sheep, pigs, horses and fowl. Shipping fever is the most economically important respiratory disease associated with Pasteurella species, affecting 15-30% of exposed cattle and resulting in a 2-5% mortality rate in the exposed population. The vaccine composition of the invention is is useful for preventing or ameliorating respiratory diseases such as pneumonia, particularly shipping fever pneumonia, in livestock. The

The oligonucleotides were annealed and ligated into vector pAA352 (contg. the Pateurella heamolytica leuko-toxin gene) which had been digested with BamHI. The ligated DNA was used to transform E. coli strain MH3000. Transformants contg. the oligonucleotide inserts were identified by restriction endonuclease mapping and the recombinant plasmid designated pAA502. The chimeric protein produced from the plasmid works to bring about a larger immune response than the antigents with the content of the chimeric protein produced from the plasmid works to bring about a larger immune response than the antigents with the chimeric protein produced from the plasmid works to bring about a larger immune response than the antigents with the chimeric protein produced from the plasmid works to bring about a larger immune response than the antigents with the chimeric protein produced from the plasmid works to bring about a larger immune response than the antigents with the chimeric protein produced from the plasmid works to bring about a larger immune response than the antigents.

                                                             QΥ
                                                                                          Matches
                                                                                                                                                                   Oligonucleotides contg. sequences from bovine Rotavirus viral protein 4 (VP4) gene were constructed on a Pharmacia Gene Assembler using standard phosporamidite chemistry. The oligonucleotides were annealed and ligated into vector pAA352 (contg. the Pateurella heamolytica leuko-toxin gene) which had been digested with BamHI. The ligated DNA was used to transform E. coll strain MH3000. Transformants contg. the oligonucleotide inserts were identified by restiction endonuclease mapping and the recombinant plasmid designated pAA501. The chimeric protein produced from the plasmid works to bring about a larger immune response than the antige alone, i.e. the leukotoxin works as a carrier protein.
                                                                                                                                                                                                                                                                                                                                         Immunological carrier system with enhanced immunogenicity comprises chimeric protein comprising leuco:toxin peptide homologous protein fused to antigen esp. somatostatin or gonadotropin releasing hormone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    misc_feature

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DЬ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           맒
                                               The LKT352 gene was prepd. as follows: lktA, an MaeI fragment contg. the gene was ligated into the SmaI site of pUCl3 to form pAA179. From this, two constructs were made in the ptac-based vector, pGH433:lacI digested with SmaI. One, pAA342, consisted of the 5' AhaIII fragment from lktA while the other, pAA345, contained the entire MaeI fragment. Clone pAA342 expressed a truncated leukotoxin peptide at high levels while pAA342 expressed full clength leukotoxin at very low levels. The 3' end of the lktA gene of pAA345 was therefore ligated to Styl/BamHI digested pAA342 to yield pAA352 contg. the LKT352 sequence. The protein expressed from the vector can be used to prepare a subunit vaccine with other P. haemolytica antigens, e.g. fimbrial protein, plasmin of the pAA342 contg. The segment of the vaccines can be used to protect cattle from respiratory diseases such as pneumonia, esp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Vaccines for Pasteurella haemolytica infection in cattle comprise sub-unit antigens from P haemolytica fimbrial protein, plasmin receptor, 50 K outer membrane protein and leukotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2528
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2468

colonies were screened for their ability to produce leukotoxin by incubating cell lysates with bovine neutrophils and measuring the release of lactate dehydrogenase from the neutrophils. A 4kb fragment was obtd. Progressively larger clones were isolated by chromosome walking to isolate full length recombinants of ca. 8kb, in pakilia. The clone was subjected to restriction enzyme digestion to yield two clones, one expressing truncated leukotoxin peptide at high levels and the other expressing truncated leukotoxin at low levels. The 3' end of the lkta gene from the full length clone was suigated to the truncated gene clone to yield plasmid pakis2. The clone was used to produce chimeric proteins by gene fusion with an antigen coding sequence, e.g. the coding sequence of somatostatin, gonadotrophin releasing hormone or rotavirus viral protein 4, i.e. leukotoxin works as a carrier protein to bring about a larger immune response than the antigen alone. Immunisation with these antigens can regulate growth rate, lactation and reproductive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gene libraries of P. haemolytica Al (strain B122) were constructed in lambda gtll and gUCl3. Resulting clones were used to transform E coli and individual colonies were pooled and screened for reaction with serum from a calf which had survived a P. haemolytica infection and that had been boosted with a conc. culture supernatant of P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        comprises chimeric protein comprising leuco:toxin peptide homologous protein fused to antigen esp. somatostatin or

                                                                                                                                                                                                                        Two expression constructs were made. One, pAA342, contained the 5'-AhaII fragment of the ltkA gene, while the other, pAA345, contained the entire lktA gene. pAA342 expressed a truncated leukotoxin peptide at high levels, while pAA345 expressed full length leukotoxin at very low levels. Therefore, the 3' end of the lktA gene was ligated into pAA342, yielding plasmid pAA352. LKT352 or new leukotoxin is 98% homologous to authentic
                                                                                                                                                                                                                                                                                                       polypeptide, esp. an immunogenic Pasteurella haemolytica leukotoxin homologous to LKT352. Example 1.2 describes the prodn. of P. haemolytica recombinant leukotoxin from pAA352.
                                                                                                                                                                                                                                                                                                                                         A vaccine comprising an outer membrane protein (OMP) extract Haemophilus somnus enriched with iron regulated proteins is not the vaccine pref. further comprises an immunogenic leukotoxin
                                                                                                                                                                                                                                                                                                                                                                                                                 Haemophilus somnus outer membrane protein extract enriched with iron-regulated proteins, opt. contg leuco:toxin antigens, for use as vaccine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Qy
                   The present sequence represents a recombinantly produced or chemically synthesised nucleic acid encoding leukotoxin 352 (LKT 352), derived from the lktA gene that is present in the plasmid pAA352. This gene produces a truncated protein that has an estimated molecular weight of about 99 kDa and lacks the cytotoxic portion of the molecule. Thus this gene has a higher expression level than that of the full-length molecule. This can be used in the construction of a chimeric protein that comprises a leukotoxin polypeptide, several multimers, and a GRH sequence. The chimeric protein can be used as a vaccine to help reduce the incidence of mammary tumours in a mammalian individual.

It was produced by ligating a synthetic sequence for 4-copy GRRH into vector pAA352 (ATC 68283), which carries the LKT-352 gene. Recombinant plasmid pCB113 (LKT 3524 copy GRRH, ATCC 69749) was obtd. Escherichia coli transformants produced the chimeric protein, which is useful as a vaccine for feature that the control of the control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gonadotropin-releasing hormone multimer fusion proteins - walkenotoxin polypeptide for increased immunogenicity, useful antifertility vaccine prodn.

This plasmid contains the LKT 352 polypeptide (AAW79568) fused to four copies of the GnRH peptide. This chimera lacks cytotoxic activity which enables there to be an increase in antigen presentation and thus an optimal immune response. The remove of this region also enables the truncated LKT to be expressed at much higher levels and allows the amount of antigen administered to be reduced. This chimeric protein comprises a leukotoxin polypeptide, several multimers, and a GnRH sequence. The chimeric protein can be us as a vaccine to help reduce the incidence of mammary tumours in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 199
